

# TOGETHER IN BATTERY MANUFACTURING

## The deep sense of our doing

La Pneumatica designs and manufactures **assembly, training and finishing lines** for the production of **batteries** for the automotive and industrial sectors: starter, standby and power motion batteries.

We offer machines that **make production processes more efficient** and **optimize plant performance** and battery quality. For several years we have been investing in the **research** and application of cutting edge technological systems. We know that commitment, preparation, efficiency and investment in research and development can solve even the most complicated problems. Because of this, the market recognizes and values us both in Italy and abroad.

LINES FOR THE PRODUCTION  
OF BATTERIES

# We shape change, every day

We have been operating in the sector since **1996**. Our accumulated **experience** allows us to know every detail of our business. This knowledge is based on the wise use of technology made available to us. In-depth mastering of every aspect of our work allows us to transform needs into production lines, dreams into reality.

The practical application of our knowledge is fundamental. Our greatest satisfaction is to see how ideas materialize and how our machines become **key elements to achieve something valid and tangible**.

## MISSION

We work to ensure production systems of the highest quality and effectiveness and to satisfy every need and growth horizon.

## VISION

Diversify and innovate transformation processes that offer the best solutions for companies, people and planet.

## Consulting: a distinctive feature

We built our work starting from listening to our clients. This allows us to:

**Offer truly transformative products and services**

**Promote both in-depth analysis and efficiency**

**Propose cutting-edge and tailor-made technologies**

**Listening** takes the form of **consultancy** that we offer in all stages of the relationship with the client from design to supply, from post-supply assistance to spare parts management.

The consultancy was born and developed from the desire to carry out what the customer thinks and wants. It is distributed along the entire supply chain and includes important aspects that often seem marginal. These include the relationship with the purchasing departments, which is managed to support requests and give answers **quickly and accurately**, as well as setting up the documentation so that it contains all the information requested by the customer.

# We cover all stages of development

Our approach to work is always oriented towards supporting the client. We follow him right from the **design** of the plant, which takes place by listening to his deepest needs and working with the spaces available and the production and growth objectives. The design is followed by the **assembly, installation and start-up phases of the system**. We give our best in all four stages of production and we guarantee systems capable of satisfying any market requirement.

DESIGN

## PRODUCTION AND ASSEMBLY

## INSTALLATION

START-UP

# GOAL 4.0

We have introduced an automated warehouse that **improves** our organizational and production capacity and supports our working method.

A shelving and software system that allows us to **automate warehouse flows and processes**. This way, we can maximize space, efficient production and make a real **difference**.

## Efficiency without compromises

Our plants offer a **noteworthy production volume** and almost absolute control over the final **quality** of the product. In addition to this, we offer the **competence** of our employees who guarantee technological knowledge and managerial and management skills that allow us to respond in a timely and concrete manner to all market **needs**.

# Our history

**1996**

La Pneumatica starts working for Italian companies. In particular for: Magnet Marell group, FIAMM, MIDAC.

**1998**

We meet Mauro Ferrazza of Ferrazza S.r.l., a Vicenza based company that deals with industrial automation. Mauro pushes us to work for the foreign market.

**2000**

We sell our first line in France.

**2001**

We move to a larger location which allows us to increase production.

**2003**

We move from 2D to 3D design.

**2006**

We begin to be present in the major trade fairs in the sector.

**2008**

We begin to cooperate with the Austrian company BM Battery Machine known today as Rosendahl Nextrom. Two years later the collaboration becomes a commercial agreement.

**2012**

We invest in the construction of the currently owned headquarters, in which we move in March 2012.

**2019**

The headquarters are further expanded.

**2021**

We change the brand and refresh its communication.

# The solidity and the prospective

Since 2006, turnover has been **growing steadily** and today 80% of it comes from foreign markets. The next steps will be the development of a Help Center that perfects the customer consultancy service, the achievement of important **certifications** and the **investment** in devices and systems that will improve our **environmental impact**.

## THE LINK WITH THE TERRITORY

We support local associations that involve young people in sports: football clubs, boxing gyms, cycling and basketball teams – so that they can grow healthily and ethically.

### CLIENTS:

EXIDE GROUP – MIDAC SPA – SIAPRA SPA – TAB d.d. – INCI GS YUASA – AKO AKU  
ACUMULADORES MOURA – HOPPECKE GMBH – JASZ PLASZTIK Ltd – PPUH AUTOPART S.A.  
CHLORIDE EGYPT S.A.E. – JSC "AKOM NAMED FOR N.M. IGNATIEV" – LLP "KAINAR AKB"  
AMARA RAJA BATTERIES LTD – SYSTEM SUNLIGHT S.A. – EXIDE INDUSTRIES
